EXAMINER

SARKAR, ASOK K

ART UNIT	PAPER NUMBER
----------	--------------

2891

DATE MAILED: 10/03/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

10/782,782

Applicant(s)

LEE ET AL.

Examiner

Asok K. Sarkar

Art Unit

2891

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 22 September 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 13-20 is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 23 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 3 – 7, filed September 22, 2005, with respect to the rejection(s) of claim(s) 1 – 13 under 35 U.S.C. 102(b) and 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art reference.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 – 6, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Rolfson, US 6,181,060.

Regarding claim 1, Rolfson teaches a method of forming a conductive pattern of a device, comprising:

- forming a conductive layer 14 on a substrate 12 such that the conductive layer protrudes above an upper surface of the substrate (see Fig. 2);
- forming a polishing protection layer 18B on the substrate 14, over the conductive layer 14, whereby the polishing protection layer presents a step between a portion of the polishing protection layer lying directly over the substrate and a portion of the polishing layer lying over the conductive layer (see Fig. 2);

Art Unit: 2891

- forming a step compensation layer 18C on the polishing protection layer 18B that reduces the step presented by the polishing protection layer 18B (see Fig. 2);
- removing portions of the step compensation layer and the polishing protection layer to expose the conductive layer and etching away part of the exposed conductive layer to form a conductive pattern on the substrate (see Figs. 3 and 4) in between column 3, line 27 and column 7, line 10.

Regarding claims 2 and 3, Rolfson teaches the polishing protection layer comprises forming silicon nitride layer on the substrate, over the conductive layer in column 5, line 1.

Regarding claims 4 – 6, Rolfson teaches forming of the step compensation layer comprises forming a layer of reflowable materials on the polishing protection layer that is formed using tetra ethyl ortho silicate by a chemical vapor deposition process (see column 4, lines 40 – 48) in between column 7, line 55 and column 8, line 12.

Regarding claims 11 and 12, Rolfson teaches removing a remaining portion of the polishing protection layer from around the conductive pattern with phosphoric acid with reference to Fig. 4 and in between column 6, line 62 and column 7, line 3.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2891

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 7 – 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Rolfson, US 6,181,060 in view of Wolf, "Silicon processing for the VLSI Era, Vol. 2, p 238 (1990), Lattice Press, CA.

Regarding these claims, Rolfson teaches etching the various layers deposited on the conductive layer in between in between column 3, line 27 and column 7, line 10, but fails to teach various stages of etching such as first planarization process (claim 7), etch-back process (claim 8), second planarization process (claim 9), chemical mechanical polishing (claim 10).

Wolf teaches that a CMP process together with an etch-back process can be very effective in rapidly planarizing elevated surface features without significantly affecting the flat areas on the substrate under the heading "Chemical Mechanical Polishing" in page 238.

Therefore, it would have been obvious to one with ordinary skill in the art at the time of the invention to modify Rolfsen and expose the protruding conductive feature on the substrate by the planarization process combining CMP process together with an etch-back process for the benefit of rapid removal of layers as taught by Wolf in page 238 and then remove the extra polishing protection layer around the conductive pattern by a wet etching process for the benefit of better selectivity between the polishing protection layer and the conductive feature.

***Allowable Subject Matter***

8. Claims 13 – 20 are allowed.
9. The following is an examiner's statement of reasons for allowance:

Claims 13 – 20 recite, inter alia, a method of manufacturing a non-volatile semiconductor memory device comprising the steps of forming a conductive layer over a floating gate structure on a substrate, forming a polishing protection layer on the conductive layer, forming a step compensation layer on the polishing protection layer and removing portions of the step compensation layer and the polishing protection layer to expose the conductive layer. Chern, US 6,706,592 teaches a method of manufacturing a non-volatile semiconductor memory device, but he fails to teach forming a step compensation layer on the polishing protection layer formed on the

Art Unit: 2891

conductive layer. Additionally, the art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

***Conclusion***

10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

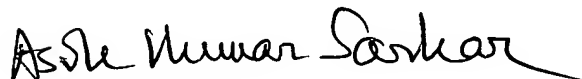

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Asok K. Sarkar whose telephone number is 571 272 1970. The examiner can normally be reached on Monday - Friday (8 AM- 5 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William B. Baumeister can be reached on 571 272 1722. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

12. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2891

For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

A handwritten signature in black ink, appearing to read "Asok K. Sarkar". The signature is fluid and cursive, with a long horizontal stroke at the end.
